SUMMARY

Results-driven **Full-Stack Engineer** with a strong foundation in **React** and **Django**. Currently serving in a technical capacity within the military, managing complex **Oracle** database systems and infrastructure. Proven track record in developing innovative solutions, including an AI-enhanced E-commerce platform with Augmented Reality integration. Skilled in bridging legacy database management with modern web development.

EXPERIENCE

Help Desk & Database Administrator | Military Service * Manage and maintain **Oracle Database** environments, overseeing multiple schemas and ensuring data integrity.

- Execute critical data operations including **Data Pump (Import/Export)**, schema migrations, and troubleshooting database connectivity.
- Provide technical support and infrastructure maintenance, resolving hardware and software issues for high-stakes operations.

Full-Stack Developer * Architected and deployed full-stack web applications using **Django** for robust backend logic and **React** for dynamic user interfaces.

- Implemented secure authentication systems and integrated third-party APIs (e.g., **PayPal API**) for financial transactions.

EDUCATION

Bachelor of Computer Science & AI | IS Department 2020-2024
Cairo University
Grade: very good (GPA: 3.01)

SKILLS

- JavaScript
- HTML
- CSS
- OOP
- SQL
- Python
- C++
- Java
- React.js
- Git
- Linux commands
- Django
- Network Basics
- Figma
- PHP

Soft Skills

- Teamwork
- Self-Learner
- Work under stress
- Good communication Skill
- Time Management
- Ability to learn new technology

PROJECTS

ASAS E-Commerce (Graduation Project)

- Developed an **A+ graded project** featuring a **web application** for **suppliers** and a **mobile app** for **customers** & **delivery personnel**. The **mobile app** leverages **augmented reality** for product visualization before purchase build using **React.js**, **Unity**, and **Firebase**.

Account Management Backend System / Financial Integration

- Developed a system control Accounts functionality, focusing on secure transaction logic and account management using **SpringBoot**.

Paypal API Integration

- Built a backend service specifically for handling international payments using **FastAPI**.

Simple e-commerce Store

- Web designed using **React.js** to show and filter different products **Django** and **SQLite** to manage and store the users and product data

AI chess agent

- Engineered an **AI Opponent** capable of evaluating board states and executing strategic moves against a human player. Implemented core game logic including piece movement validation, turn management, and board visualization using external media assets.

Connect 4 game

- Developed a Python-based **Connect 4** game featuring a sophisticated AI opponent.

LANGUAGES

- **Arabic:** Native
- **English:** Very Good
